

**Netgem brings the Connected Home Experience to CES 2012**

**Neully, France, December 6<sup>th</sup>, 2011:** Netgem (<http://www.netgem.com>), a leader in connected home technologies and solutions, will present its nCloud connected home solution at CES 2012 in Las Vegas between January 10<sup>th</sup> to 12<sup>th</sup>2012.

At last year's CES, tablet devices generated a lot of buzz, this year, Netgem is developing that story and will use the show to demonstrate how it can optimize the consumption of TV and broadband content across multiple screens within the connected home. The company will highlight how it enables interoperability between connected TVs with smartphones and tablets using the Android and iOS operating systems to offer end users with a richer and more feature-rich experience.

Netgem has built a comprehensive multi-screen ecosystem by making use of its nCloud media server. This has been designed to meet the demands of TV customers looking for a Cloud-type experience and provides simple and consistent access to all content, including live TV and video on demand, from any connected device within the home. The hybrid nCloud approach enables service providers to blend their broadcast content with streaming and on-demand content and Over the Top services from the Cloud, whilst preserving the user's privacy by maintaining their own content within the home network.

At CES Netgem will highlight its latest hardware range including its media server featuring Network Attached Storage functionality. It will also show new Social TV applications developed around the nCloud software platform that allow end-users to interact with their favorite TV shows for an entirely different TV experience.

You can schedule a meeting at CES2012 by emailing [jda@netgem.com](mailto:jda@netgem.com)

**About Netgem:** Netgem is a leader in technology solutions for digital convergence. Netgem provides its technology and solutions to telecom operators enabling them to add value and services to their broadband offerings in a challenging multimedia and multi-screens environment. Based upon Netgem's hardware and software technologies, operators are able to develop innovative convergent services and a unique broadcast TV experience, enriched by the power of Internet. Netgem is present in more than ten countries around the world with an install base of more than 3 million. Netgem is listed on Compartment C of Euronext Paris Eurolist.
